Actionee HAIS

Sub Category

Subject COTS physical management software

Description of Problem or Suggestion:

If the number of managed entities (device and applications) increases over time, there may exist a need to perform physical management in an automated manner.

Without a physical management system, managing a large number of devices and applications may become a serious problem.

Originator's Recommendation

Perform a study or begin prototyping activities to determine if currently available COTS physical management packages provide the required capabilities.
